SESSION: 6NOV87, 1116-1159

*Having located the Silkworm missiles in a large storage facility, which is located above a very interesting archeological site, there is much difficulty in trying to determine the number of missiles present. The missiles do not appear to be assembled at this time. It appears that there are three components to each missile. Three is the common denominator. ~~There~~ ~~difficultly, however~~ There could be three, thirty, or three hundred missiles here, but it takes three of "something" to make one missile.*

4½ - problem with putting the pieces together to make a missile  
the fuselage is in one place, the wings in another. As if not assembled  
yet. Difficulty in counting number of possible complete units because  
the pieces are not together
